

Migrate to IBM Cloud Satellite

Overview

Migrate to IBM Cloud Satellite provides professional services to quickly, confidently and securely migrate and validate workloads to an IBM Cloud Satellite or Satellite Connector solution. Let IBM Technology Expert Labs migrate with the right migration method and migration plan to mitigate the risk to your business operation.

Target Audience

- Solution architects who want efficient and risk mitigated migrations of workloads to IBM Cloud Satellite or Satellite Connector.
- LoBs executives who want to on-board IBM Cloud Satellite services with the least business risk through workloads migrated with skilled, experienced resources and best practices.
- IT operations managers who care about de-risking migration and cutover of workloads to IBM Cloud Satellite and Satellite Connector.

Why Use This Service?

- To confidently migrate workloads to IBM Cloud Satellite or Satellite Connector with the right migration method to meet your workload needs.
- To reduced operational risk during workload cutover to IBM Cloud Satellite services.
- Self sufficiency reducing the need for professional services for further migration of workloads.

Value Proposition

- The migrate phase for any IBM Cloud Satellite solution presents the highest risk to your business operations with the cutover of workloads from one environment to another.
- Reduce that risk and any migration outage windows by using Technology Expert Labs-Cloud's deep expertise, experience and best practices in executing the right migration plan and method for your workloads, users and business operation.
- Technology Expert Labs-Cloud can provide as little or as much expertise as you need, from lightweight guiding and enabling to help you become self sufficient in migrating workloads to IBM Cloud Satellite and Satellite Connector solutions, through to turnkey migration of all your workloads.

Deliverables / Outcome

- Workloads migrated and validated in IBM Cloud Satellite or Satellite Connector with risks mitigated.
- Workloads migrated to pre-determined plan, outage windows, timeframe and cost.
- Self sufficiency for migrating of further workloads.
